Configuring AWS Lambda

Lambda > Functions > Create function

Create function

Choose one of the following options to create your function.

☒ Author from scratch
Start with a simple Hello World example.

☐ Use a blueprint
Build a Lambda application from sample code and configuration presets for common use cases.

☐ Container image
Select a container image to deploy for your function.

Basic information

Function name

Enter a name that describes the purpose of your function.

summarize_web_page

Function name must be 1 to 64 characters, must be unique to the Region, and can't include spaces. Valid characters are a-z, A-Z, 0-9, hyphens (-), and underscores (_).

Runtime

Choose the language to use to write your function. Note that the console code editor supports only Node.js, Python, and Ruby.

nodejs24.x

Architecture

Choose the instruction set architecture you want for your function code.

☐ arm64

☒ x86_64

Lambda > Functions > summarize_web_page > Edit basic settings

Basic settings

Description - optional

Memory

Your function is allocated CPU proportional to the memory configured.

128 MB

Set memory to between 128 MB and 10240 MB

Ephemeral storage

You can configure up to 10 GB of ephemeral storage (/tmp) for your function. [View pricing](#)

512 MB

Set ephemeral storage (/tmp) to between 512 MB and 10240 MB.

SnapStart

Reduce startup time by having Lambda cache a snapshot of your function after the function has initialized. To evaluate whether your function code is resilient to snapshot and .NET runtimes, [view pricing](#).

None

Supported runtimes: .NET 10 (C#/F#/PowerShell), .NET 8 (C#/F#/PowerShell), Java 11, Java 17, Java 21, Java 25, Python 3.12, Python 3.13, Python 3.14.

Timeout

1 min 4 sec

Execution role

To access other AWS services and resources your function needs an IAM role. Choose a role with the right permissions for your function.

Create new role

AWS Lambda Code

The screenshot displays two parts of the AWS console. The top part shows the 'Specify permissions' step for creating a policy. The bottom part shows the 'Code source' view of a Lambda function.

Specify permissions

Step 1: Specify permissions (selected)
Step 2: Review and create

Policy editor

```
1 {  
2   "Version": "2012-10-17",  
3   "Statement": [  
4     {  
5       "Sid": "InvokeBedrockModels",  
6       "Effect": "Allow",  
7       "Action": [  
8         "bedrock:InvokeModel",  
9         "bedrock:InvokeModelWithResponseStream"  
10      ],  
11      "Resource": "*" ]  
12    }  
13  ]  
14 }
```

Code source

Successfully updated the function "summarize_web_page".

Summary

Sednor is a team of software development professionals who are passionate about creating groundbreaking solutions for their clients.

They offer a range of services including MVP Development, Staff Augmentation, Product Design, Discovery Phase, and Maintenance.

Sednor's team is highly skilled, professional, and adaptable, ensuring quality and agility in the development process.

They have worked with various clients across different industries, including Cloud Technology Partners, Dairyland Laboratories, and Opologic.

Sednor's mission is to harness technology to create groundbreaking solutions that make a difference and empower companies to innovate.
