Configure CloudWatch Metric Filter and CloudWatch Alarm to monitor traffic

Step 1

Define pattern

Step 2

Assign metric

Step 3

Review and create

Define pattern

Create filter pattern

You can use metric filters to monitor events in a log group as they are sent to CloudWatch Logs. You can monitor and count specific terms or extract values from log events and associate the r

Filter pattern

Specify the terms or pattern to match in your log events to create metrics.

☐ Enable metric filter on transformed logs
When enabled, metric filter will be applied to transformed logs. When disabled, metric filter will be applied to original logs.

Field selection criteria - optional

Filtering options based on account and region provided for centralized log groups

Test pattern

The test does not include the field selection criteria

Select log data to test

All log data fetched will be in original log format

Log event messages

Type log data to test with your Filter Pattern. Please use line breaks to separate log events.

```
